

What's new in Direct Planning 3.2 ?

We listened to your feedback regarding the previous iterations of Direct Planning and we are proud to introduce the new features of version 3.2!

In addition to optimizing the functions you already use every day, it includes many innovative functionalities that will allow you to plan with even more efficiency.

We have grouped these novelties under the following categories. Click on each one for more information.

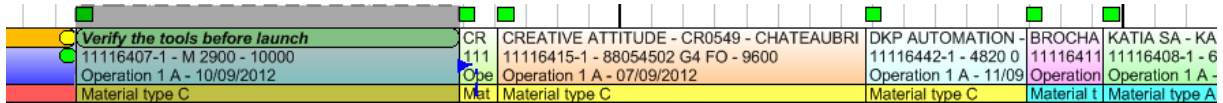

1. Selecting and moving jobs.....	2
New selection modes	2
Moving multiple jobs.....	2
2. "Copy and paste" function	4
3. "Schedule via a list"	5
4. Machine-specific configurable lists	6
5. Overall usability.....	6
Redesigned interface.....	6
Keyboard shortcuts.....	7
Highlighting.....	8
Display mode configuration.....	8
Workload histogram	8
Calendars	8
Inactivity areas.....	8
Search and lists	8
Resources (machines) display in the planning.....	10
Various.....	10

1. Selecting and moving jobs

New selection modes

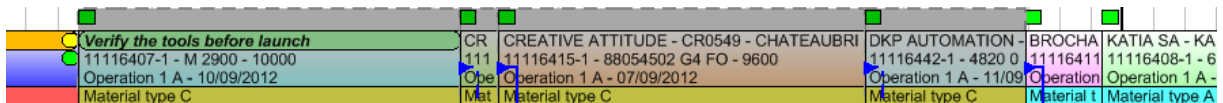

Various methods are available to **select a set of jobs**:

- You can still use the **selection box** as well as the **Ctrl+click** function to extend the selection.
- We have introduced **shift clicking**: After selecting a first job, shift click on a second job to select every job located between them (selection by range), as in the following example:

Verify the tools before launch	CR	CREATIVE ATTITUDE - CR0549 - CHATEAUBRI	DKP AUTOMATION - BROCHA	KATIA SA - KA
11116407-1 - M 2900 - 10000	111	11116415-1 - 88054502 G4 FO - 9600	11116442-1 - 4820 0	11116411 11116408-1 - 6
Operation 1 A - 10/09/2012	Oper	Operation 1 A - 07/09/2012	Operation 1 A - 11/09	Operation 1 A -
Material type C	Mat	Material type C	Material type C	Material type A

+ **Shift click** on the last job sharing the same material type (Type C):

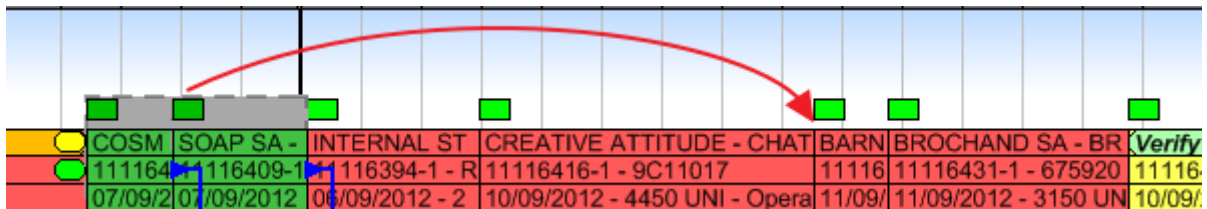

Verify the tools before launch	CR	CREATIVE ATTITUDE - CR0549 - CHATEAUBRI	DKP AUTOMATION - BROCHA	KATIA SA - KA
11116407-1 - M 2900 - 10000	111	11116415-1 - 88054502 G4 FO - 9600	11116442-1 - 4820 0	11116411 11116408-1 - 6
Operation 1 A - 10/09/2012	Oper	Operation 1 A - 07/09/2012	Operation 1 A - 11/09	Operation 1 A -
Material type C	Mat	Material type C	Material type C	Material type A

Moving multiple jobs

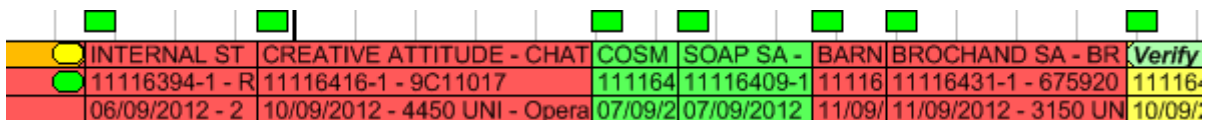

We have brought the following changes for **moving of a set of jobs** (multiple selection):

- If the selected jobs are grouped, you can now be certain that they will **remain together** on the drop location:

COSM	SOAP SA -	INTERNAL ST	CREATIVE ATTITUDE - CHAT	BARN	BROCHAND SA - BR	Verify
111164	1116409-1	1116394-1 - R	11116416-1 - 9C11017	11116	11116431-1 - 675920	11116
07/09/2	07/09/2012	06/09/2012 - 2	10/09/2012 - 4450 UNI - Opera	11/09/	11/09/2012 - 3150 UN	10/09/

Before movement

INTERNAL ST	CREATIVE ATTITUDE - CHAT	COSM	SOAP SA -	BARN	BROCHAND SA - BR	Verify
11116394-1 - R	11116416-1 - 9C11017	111164	11116409-1	11116	11116431-1 - 675920	11116
06/09/2012 - 2	10/09/2012 - 4450 UNI - Opera	07/09/2	07/09/2012	11/09/	11/09/2012 - 3150 UN	10/09/

After movement: The jobs remain together

- If the selected jobs are not grouped, the moving function will automatically group them and align them with the **leftmost job**. This is very useful to position and group a set of jobs via a **single drag and drop operation**:

Multiple selection before movement

After movement: The selected jobs are grouped

- A context menu (right click) named “**Cluster jobs of selection**” also groups every selected job and aligns them with the **leftmost selected job**. This is particularly useful to group spaced out jobs:

Multiple selection before grouping

After grouping: Moved jobs are aligned with the leftmost job

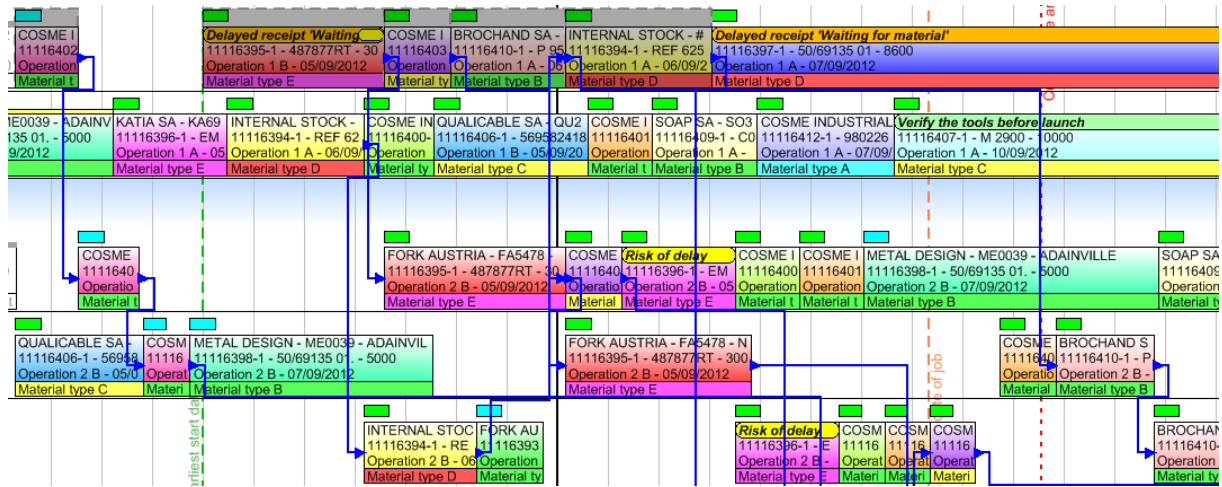

- For “long distance” movements, you no longer need to use the drag and drop function: You can now simply select your job, go to the drop location, do a right click on the planning background and click on “**Move selection here**”.
- If you wish to move your selection to a location where the planning already includes jobs, you can still display this context menu by right clicking right above the job.
- The addition of the “**Move selection here**” option replaces the Cut and paste function (and associated shortcut Ctrl+X) that was rarely used in Industry mode and Project mode because it broke the links.

Selected jobs are now **more visible** thanks to a grey box that sticks out from the job:

Regarding the selection of multiple jobs:

Route links for all selected jobs are now displayed:

- The **green dotted vertical line** represents the most binding of the **earliest start dates** among the selected jobs.
- The **orange dotted vertical line** represents the most binding of the **latest end dates** among the selected jobs.
- The context menu **"Gather the jobs of the route"** is now available. From left to right for every selected job, it consecutively groups every respective route.

The **vertical repositioning** of the planning has been **removed** because it could be inconvenient during a drag and drop operation.

2. "Copy and paste" function

In the **context menu** of a job, we have retained the **"Copy (Ctrl-C)"** function.

The **Paste** shortcut (**Ctrl+V**) remains available to copy the selected job right behind it.

Right clicking on the planning background reveals a new option (**"Paste here"**), which is available to perform the copy in a specific location:

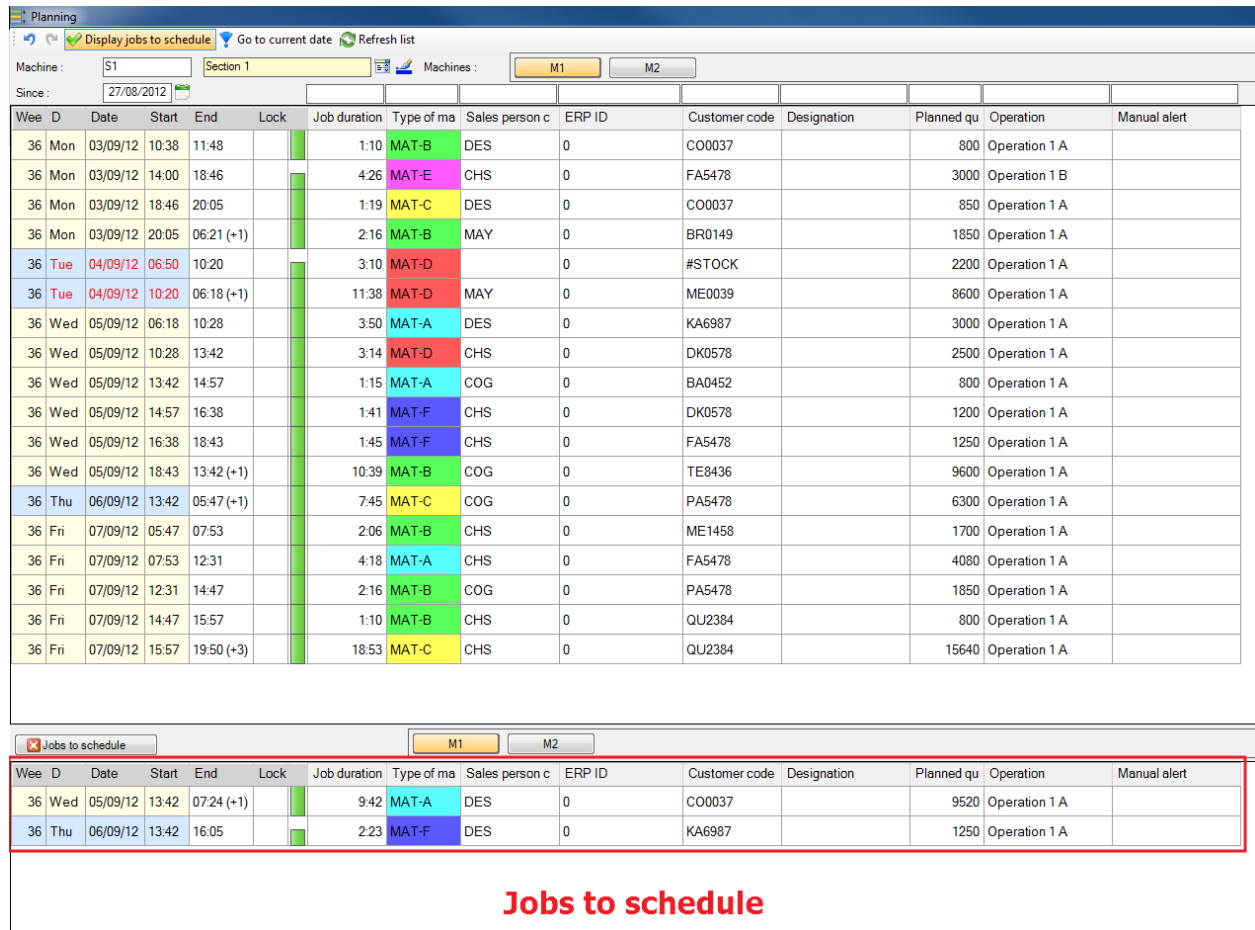

The former duplication action **"Ctrl+Drag and drop"** has been removed because it was too risky.

3. "Schedule via a list"

This brand new functionality is available from the ribbon and from various context menus (e.g. on the name of a machine on the left side of the planning).

You can also access it rapidly by selecting a job and pressing **Ctrl+P**.

This feature allows you to schedule jobs by **dragging and dropping** them vertically in a special list, in conjunction with scheduling via the Gantt chart that you are already familiar with:

The screenshot shows the 'Planning' window with a list of jobs. Below the main list, a 'Jobs to schedule' window is open, displaying a filtered list of jobs. The jobs in the 'Jobs to schedule' window are:

Wee	D	Date	Start	End	Lock	Job duration	Type of ma	Sales person c	ERP ID	Customer code	Designation	Planned qu	Operation	Manual alert
36	Wed	05/09/12	13:42	07:24 (+1)		9:42	MAT-A	DES	0	CO0037		9520	Operation 1 A	
36	Thu	06/09/12	13:42	16:05		2:23	MAT-F	DES	0	KA6987		1250	Operation 1 A	

Jobs to schedule

List of scheduled jobs and jobs to schedule colored by material code.

The left side of this window displays some standard columns that cannot be changed. The right side allows you to customize the columns for this shop floor (with a right click on the column header). This way, you can view as columns the technical data that are useful for the scheduling.

For a given section, you can configure the background colour of the "End" and "Lock" columns, for example as per an important **technical data** for this section.

In these lists, you can **select one or more jobs** and **drag and drop** them to their desired location.

When you enter a **column header filter** (e.g. a material code) a background colouration allows you to identify the lines that match this criterion.

The lower part of this list displays the  for this machine.

In the same section, the buttons   allow you to **switch between machines**, for the **scheduled jobs** as well as for the **jobs to schedule**.

A **click** in the table also **selects** the job in the Gantt and conversely.

A **double-click** in the list allows you to **refocus the Gantt**, by bringing that job into **focus**.

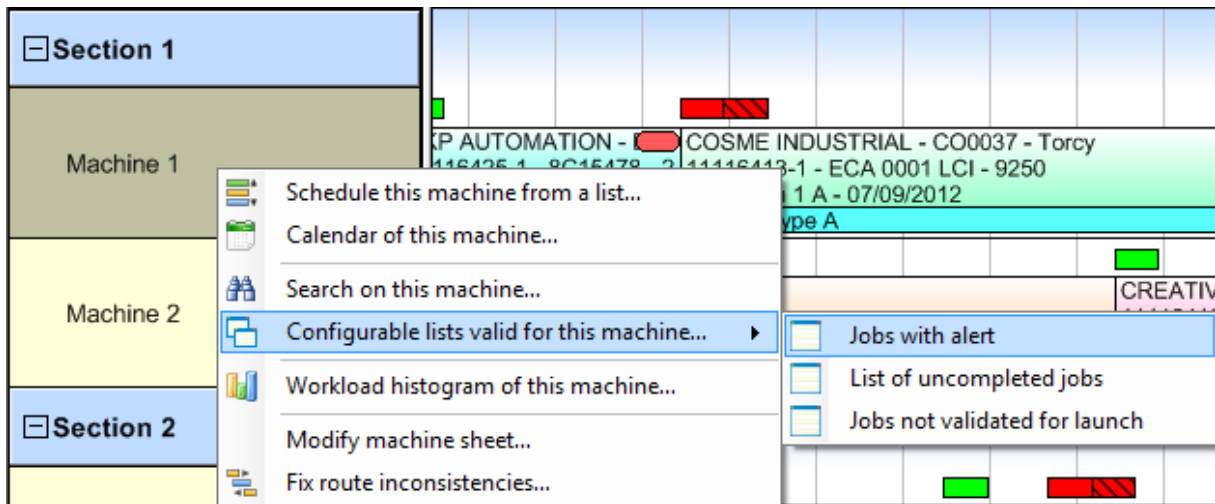

In the list, a column of **green pictograms** allows you to view whether the jobs are grouped or not in the planning:

	Grouped jobs
	Non-grouped jobs

This list is not intended to be opened all the time because managing the list and the Gantt simultaneously has a negative impact on response times.

4. Machine-specific configurable lists

On the **left** side of the planning, a **right click** on the name of a machine now displays the configurable lists that are specific to that machine (as well as the general lists which do not filter any machine in particular):

5. Overall usability

Redesigned interface

We have **reorganized and simplified** the ribbon, including the **“Home”** tab:

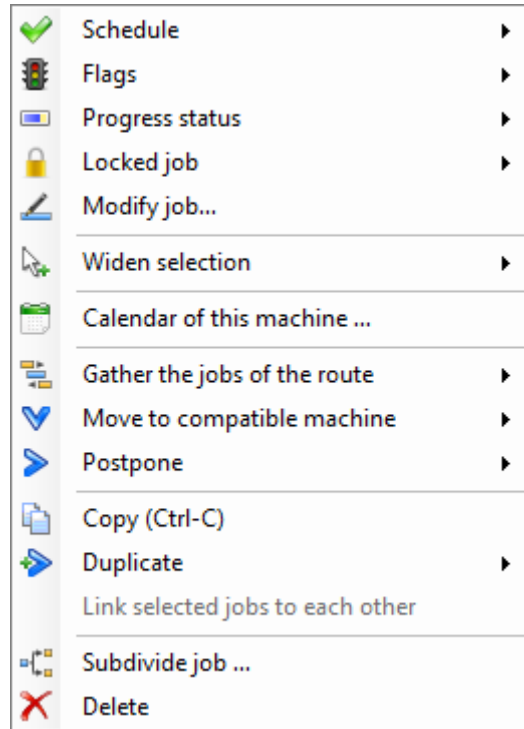

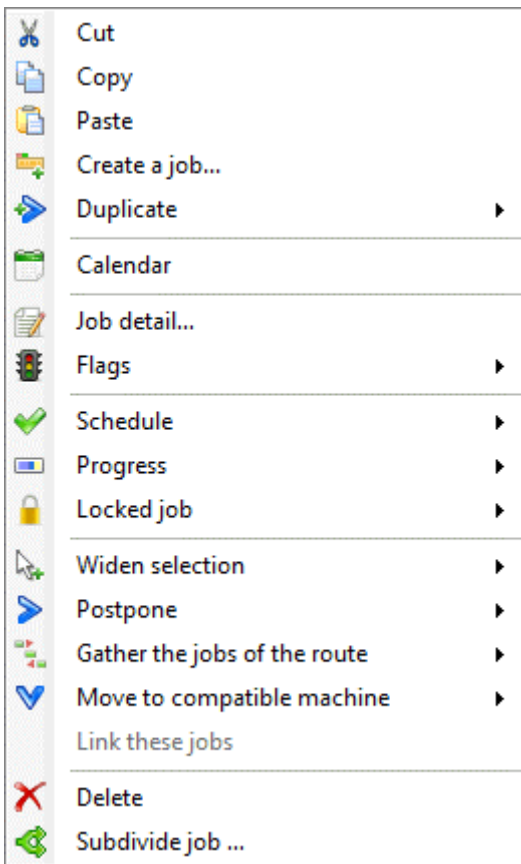

Direct Planning 3.1

Direct Planning 3.2

as well as every **context menu** (right click):

Right click on a job in Direct Planning 3.1 (left) and Direct Planning 3.2 (right).

For display modes without flags, an inactivity area crossed by a job could be hard to spot.

Thanks to an **increase of the line height**, such jobs are now visible in **all cases**.

Keyboard shortcuts

Keyboard shortcuts are now better indicated in menus.

If select a job on a machine, the “**Alt+End**” shortcut now takes you to the last job for this machine, whereas the “**Alt+Home**” takes you to the first “unfinished” job for this machine.

Offering the same functionality as the “+” and “-” keys on the numeric pad, the new shortcut “**Ctrl+Shift+Mouse wheel**” allows increasing or reducing temporarily the scope of visualisation for the planning.

Highlighting

Job highlighting is now visually more pronounced:

KATIA SA - 11116435-1 - Operation 2	CREATIVE AT 11116427-1 - 5 Operation 2 B -	BARNAY 1111643 Operatio
Material type	Material type E	Material t

Display mode configuration

In the edition of a display mode, under the “Job display” tab, deletion icons (✖) are now displayed next to each data to display:

and the  icon allows switching between two display lines:

Workload histogram

By default, the **workload histogram** now opens with a more relevant scope of visualisation: **3 weeks**.

Calendars

For a faster access, the “**Calendars**” tab now includes a button called “**Calendar of time scale**”:

As a reminder, it defines the periods of time to hide via the “**Compact time scale**” function.

Inactivity areas

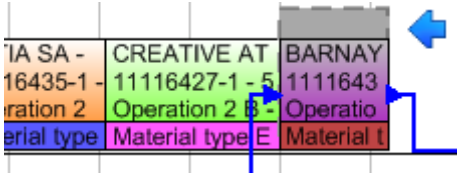

A **tooltip** on each **inactivity area** now informs you about its start time and its end time:

Search and lists

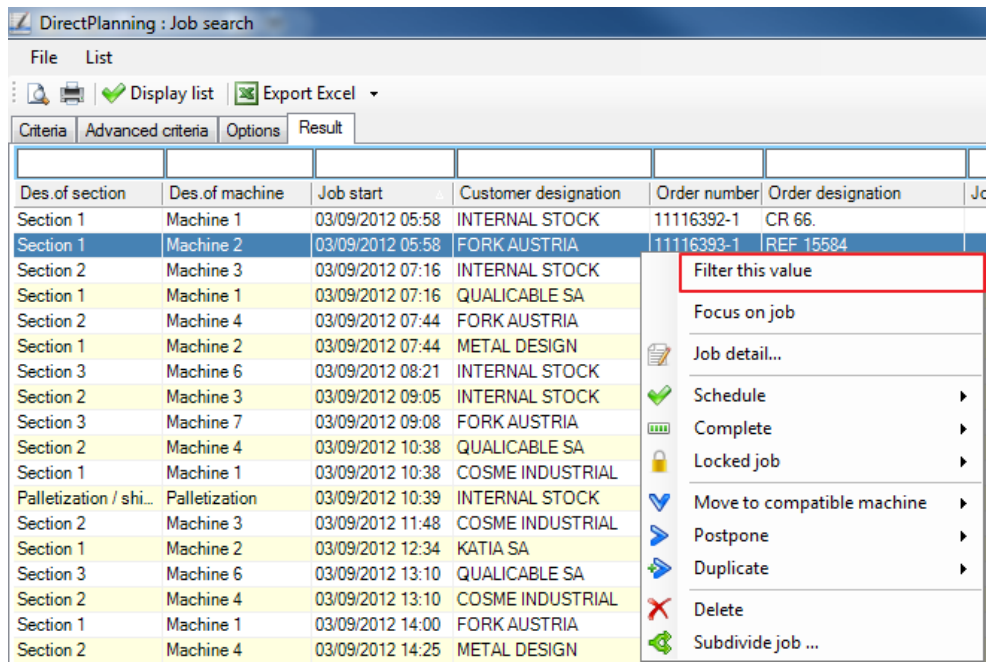

From the search window, a **double click** on a job **selects and centres** the planning on that job. However, a little job could be hard to locate.

A **more contrasted display** of the selected job as well as an **animated arrow** now provide a **clear visualisation** of the location of the searched job:

IA SA -	CREATIVE AT	BARNAY
16435-1 -	11116427-1 - 5	1111643
Operation 2	Operation 2	Operatio
Material type	Material type E	Material t

In the search result, the right click menu now includes a new entry **“Filter this value”**. This action positions the current value in the column header filter, as in the following example:

Des. of section	Des. of machine	Job start	Customer designation	Order number	Order designation
Section 1	Machine 1	03/09/2012 05:58	INTERNAL STOCK	11116392-1	CR 66.
Section 1	Machine 2	03/09/2012 05:58	FORK AUSTRIA	11116393-1	REF 15584
Section 2	Machine 3	03/09/2012 07:16	INTERNAL STOCK		
Section 1	Machine 1	03/09/2012 07:16	QUALICABLE SA		
Section 2	Machine 4	03/09/2012 07:44	FORK AUSTRIA

Palletization / shi...	Palletization	03/09/2012 10:39	INTERNAL STOCK		
Section 2	Machine 3	03/09/2012 11:48	COSME INDUSTRIAL		
Section 1	Machine 2	03/09/2012 12:34	KATIA SA		
Section 3	Machine 6	03/09/2012 13:10	QUALICABLE SA		
Section 2	Machine 4	03/09/2012 13:10	COSME INDUSTRIAL		
Section 1	Machine 1	03/09/2012 14:00	FORK AUSTRIA		
Section 2	Machine 4	03/09/2012 14:25	METAL DESIGN		

In this column, the chosen filter is the **“Customer designation”**.

Palletization / shi...	Palletization	14/09/2012 10:08	FORK AUSTRIA	11116444-1	LM 8795215465 MP	

After clicking on “Filter this value”, we can notice that the filter “FORK AUSTRIA” is populated and applied.

Resources (machines) display in the planning

All the resources (the machines in Industry mode) of the planning are now displayed, even if the resource line does not contain any job. If you wish to exclude some resources, you can do it when you configure the **display modes**.

Various

In case of anomaly, the mail sent to the support now includes your Direct Planning version number in the subject line of your message.
